Movie Title in Header of Movie Details Page

The Movie Details page was showing “Movie Details” as the title no matter which movie you clicked on. Now, when you click on a movie, its title appears in the Header of the Movie Details page. I did this by replacing the movie title with {{ movie?.title }} which pulls the movie title from the API.

“No Image” Handling for Cast & Crew

Some cast & crew members don’t have their photo on TMDb. I added a check so that if no photo is available, the text “No image” is shown instead of a broken image.
